### ***Reasons For Allowance***

The following is an examiner's statement of reasons for allowance: In view of the applicants' response filed June 21, 2005 in which it was established that the Litt et al (USP 5,586,561) does not teach as claimed a ***polymer electrolyte comprising a sulfonated product denoted by the formula (I),  $---[X]_x---[Y]_y-[Z]_z-$*** , wherein the ***sulfonated product must have at least two Y structures in a row, when "y" is an integer of two or more and the sulfonated product comprises the combination of the structures Y and X and/or the structure Z and the two aromatic rings are directly combined at the ends of structures Y and X;*** that exhibits properties such as proton conductivity, hot water resistance and Fenton's reagent resistance and the membrane electrode assembly comprising an electrolyte membrane comprising the polymer denoted by formula (I); thus claims 1-11 are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Prior Art***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. These references are cited to show the state of the art of polymer electrolytes and proton conductive membranes and membrane electrode assemblies; Yan, Jacob, Asano, Shinoda, JSR CORP, TOYOBO CO LTD and Ogata.
